

Counterpart - Study on the impact of the COVID-19 pandemic in perinatal mental health

Vera Mateus and Ana Osório (Mackenzie), together with researchers from several foreign universities (Portugal, Spain, United Kingdom, Greece, Cyprus, Israel, Turkey and Malta), participated in the preparation and dissemination of the study on the impact of the COVID-19 pandemic in perinatal mental health. The study is aimed at assessing mental health indicators of pregnant women and / or mothers with infants aged up to 6 months in several countries around the world.
