Concern : Letter of support

To whom it may concern,

This is a letter in support of the proposal “From Microscope to Telescope: Interdisciplinarity to Foster Human Development,” currently being submitted by Universidade Presbiteriana Mackenzie to Coordenação de Aperfeiçoamento de Pessoal de Nível Superior (CAPES) within its internationalization call.

Within the proposal and together with my colleagues, Prof. Jean-Marie Raquez and Dr Leila Bonnaud, I confirm my intention to collaborate with the research theme “Micro and nanostructured multifunctional materials,” by receiving students and researchers from Universidade Presbiteriana Mackenzie as well as sending researchers from the Center of Innovation and Research in Materials & Polymers – CIRMAP, Laboratory of Polymeric and Composite Materials (UMONS) to visit MackGraphe.

With my best personal regards, sincerely,

Full Professor at University of Mons, Belgium

Director of the Center of Innovation and Research in Materials & Polymers

Elected member of the Royal Academy of Belgium (Class of Sciences)

Member of the European Academy of Sciences (Engineering Division)
